

**Thematic School on Modelling and visualising spatial dynamics:  
 Reasoning on long time spans and uncertainty**

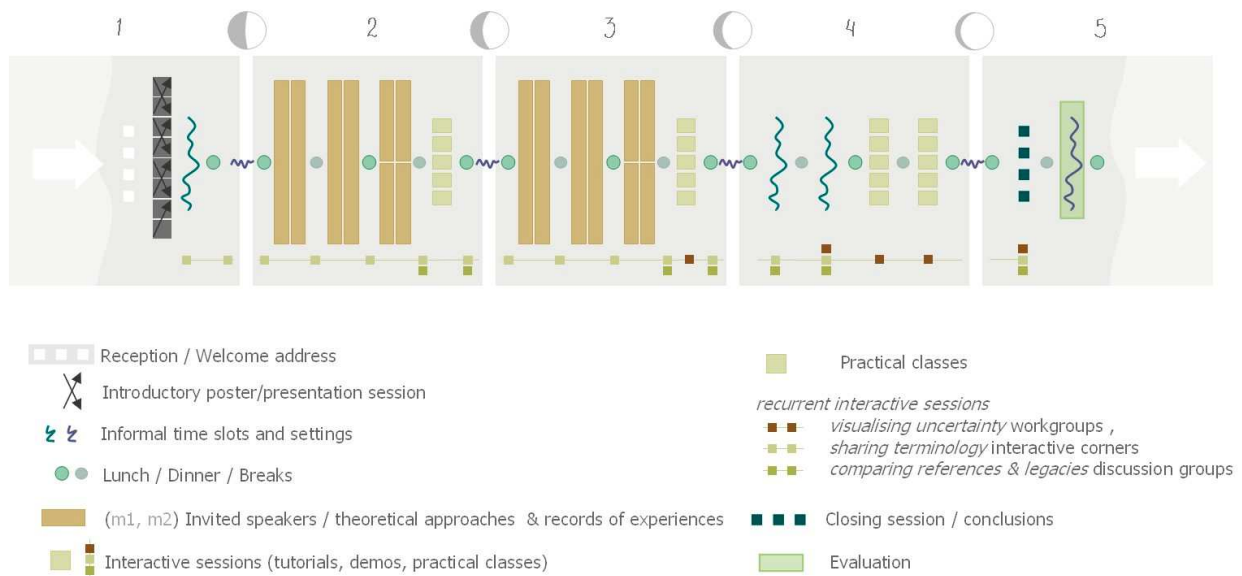

Fréjus (France / Var) 8-12 October 2012

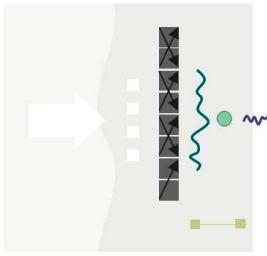

**PROGRAMME HEADLINES**

The MOVE\_REAL 2012 Workshop & tutorials combines three types of sessions:

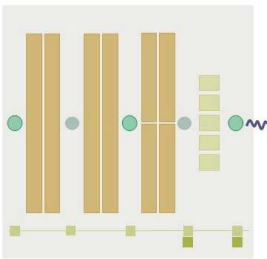

- Invited talks in which theoretical approaches as well as records of experiences will be presented in a classic conference-like format. These talks are distributed as follows: one day dedicated to modelling issues, and another to visualisation issues.
- Recurrent interactive sessions distributed all along the event in which formal and informal workgroups will address issues such as visualising uncertainty, legacies and references that can be shares across disciplines, or understanding one another’s interpretation of some transversal notions like transformation, processes, representation (*etc.*).
- Practical classes (structured data sets on the event’s site and its history, proposed as test field) helping participants to try and weigh in what visual analytics concepts and methods can help reasoning on long time spans and uncertainty.

The programme also includes an introductory poster/presentation session (day1) during which each participant will be given time to present his research, so as to quicken contacts, underline common interests, and set the pace for further exchanges. In addition, some informal time slots are left open for participants to contribute by other means if they wish (demos for instance), and thereby interact with the organisation.

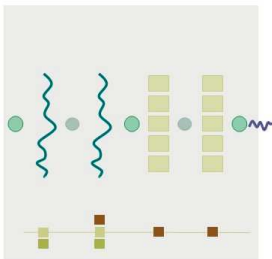

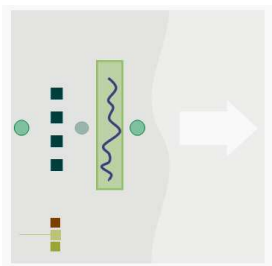

On *the first day* the event's reason to be and objectives will be presented - but the programme also includes an introductory poster/presentation session (day1) during which each participant will be given time to present his research, so as to quicken contacts, underline common interests, and set the pace for further exchanges.

*The next two days* will be dedicated for the former to modelling issues and for the latter to visualisation issues. There will be four to six invited talks in full sessions, and then two parallel sessions on records of experiences. Practical classes will conclude those two days.

Practical classes will be resumed during *the fourth day*, along with group discussions and work sessions (recurrent interactive sessions). In addition, some informal time slots are left open for participants to contribute by other means if they wish (demos for instance), and thereby interact with the organisation.

On *the last day* recurrent interactive sessions will be analysed, and the event evaluated.

\*\*\*

The workshop will start in the late afternoon on Monday 8th October (reception 15:00–16:30) and will end in the early afternoon on Friday 12th October.
